# INTRODUCTION

SSIP products are the leading single use choice when you are looking for a vast range of suction tips and disposable accessories.

## High Quality - Safe Products - Easy and Fast

Doctors prefer the SSIP products for numerous reasons:

### Clean

Guaranteed clean and sterile. It is time consuming and very difficult to clean the reusable suction instruments. There is a clear trend all over the world to use single use products in healthcare in order to have a better quality control and avoid infections. One in twenty patients acquire infections during their hospital stays.

### Cost Efficient

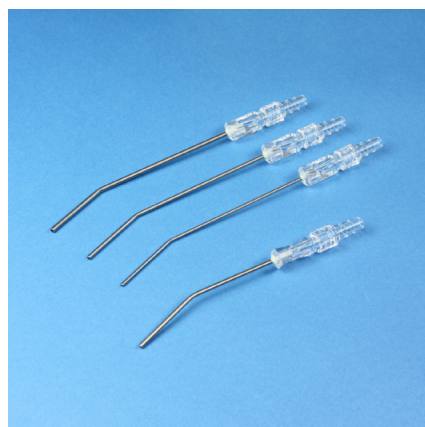

The price of cleaning and sterilizing a reusable tool (not even the cost of the tool included) is often higher than the SSIP disposable products. According to the U.S. Centers for disease control and Prevention, patients who get infections in the hospital cost the U.S. health care system nearly \$10 billion per year

### Specially Designed

The SSIP suction tips were designed in close collaboration with doctors. The angle of the suction tips enables the doctor to have a free view through the microscope. The suction control handle connector facilitates quick change of suction tips during surgery.

Within this document you can learn about some of the typical applications, purposes, and advantages of our products.

## METAL SUCTION TIPS: PRODUCT GUIDE

Middle ear surgery is a typical field of application for the medium and smaller sized metal suction tips. Both sizes are used, together with suction control handles and a suction tube during micro surgery, pending the diameter that is needed.

Examples of applications:

- Metal suction tips 2.5 x 80 mm, 2.0 x 70 or 80 mm, and 1.7 x 70 or 80 mm: Cleaning the ear canal before surgery
- Metal suction tip 1.4 x 70 mm: Suction of blood and fluids and also to keep a clear line of sight.
- Metal suction tip 1.0 x 70 or 80 mm is used for Ossicles implants during Ossiculoplasty
- Metal suction tips 0.7 x 70 or 80 mm and 0.4 x 70 or 80 mm is used during Ossiculoplasty and also for placement of implants

## Performed Sinus Catheter (PSC)

Used for postoperative placement into the maxillary sinus cavity in order to enable flushing of the patient during the first days after surgery. Studies show that patients who are regularly flushed after surgery heal faster and have less pain. This product can be placed in vivo for up to 96 hours. The PSC is placed before you pack the nose, then you can leave it in. This means that it is possible to flush the patient without pain and replacing tubes/drain every time. This has a question mark shape that secures flushing towards the bottom of the maxillary cavity where most of the mucus normally collects.

Sinus catheter made of soft and rigid DEHP free PVC.

		French	Length	Box	Case
6066505	PSC, Preformed sinus catheter DEHP-free			10	80
6066508	Siegle glass set includes glass, tube and bulb			1	50

## Antrum Irrigation Set

For flushing of maxillary sinus cavities on patients with acute sinusitis.

1.4 x 80 mm needle, 25 cm tube connectable to Flusher Syringe Sject 100 ml (See page 19).

## Nasal Specula

A single use specula with reversed spring function which allows the specula to enter the nostril and carefully hold it in place with a spring, thereby giving room for work with two hands. Perfect for MRSA, HIV infected patients, etc. where there is a bigger risk of cross infection.
